ANALOGE ELEKTRONISCHE SCHALTUNGEN

DIGITALE ELEKTRONISCHE SCHALTUNGEN

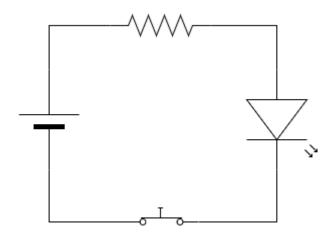

BEISPIEL: SCHALTUNG FÜR FLIP-FLOP

Spannungsquelle

Elektronische Bauelemente

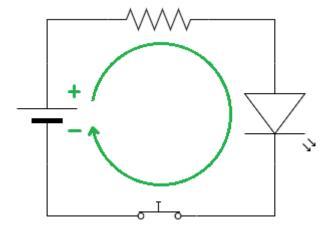

Leitungen

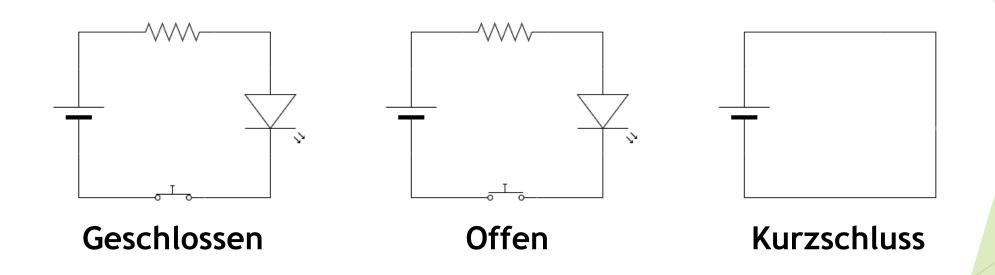

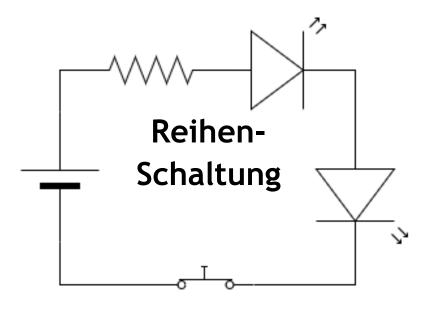

- Durchgehende Verbindung vom Plus- zum Minuspol
- Spannungsunterschied

Strom fließt von **High** nach **Low**

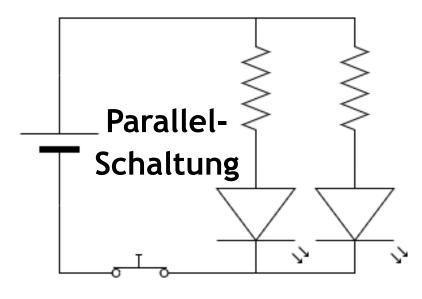

U verteilt

I gleich

U gleich

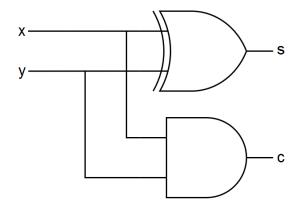

I verteilt

Digitale elektronische Schaltungen

Digitale elektronische Schaltungen

Signale mit diskreten Werten

- Logik-Gatter
 - ► AND
 - ► OR
 - ► NOT

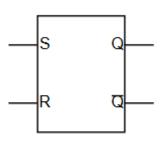

Flip-Flops

Zwei Zustände

Speichern ihren Zustand

Komplexe Berechnungen

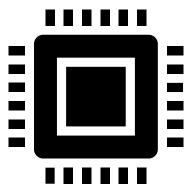

Digitale elektronische Schaltungen

Integrated Circuits (IC)

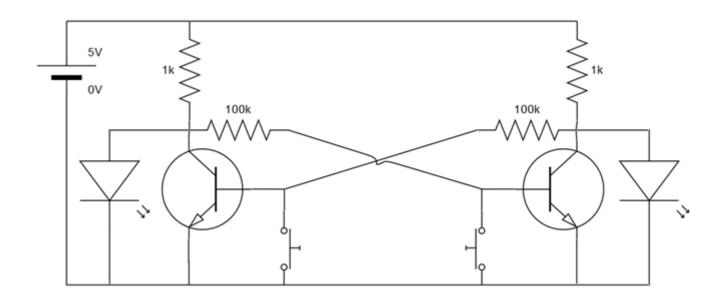

Voraussetzung für Mikroprozessoren!

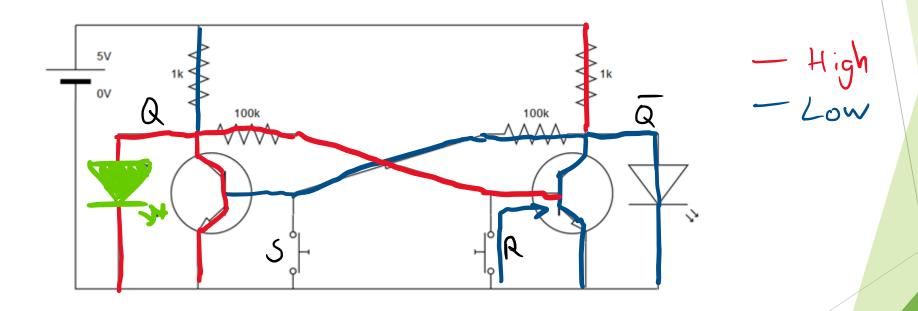

Beispiel: Schaltung für Flip-Flop

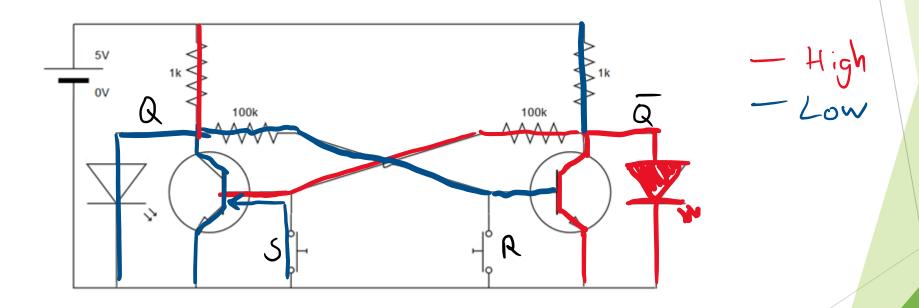

Schaltplan

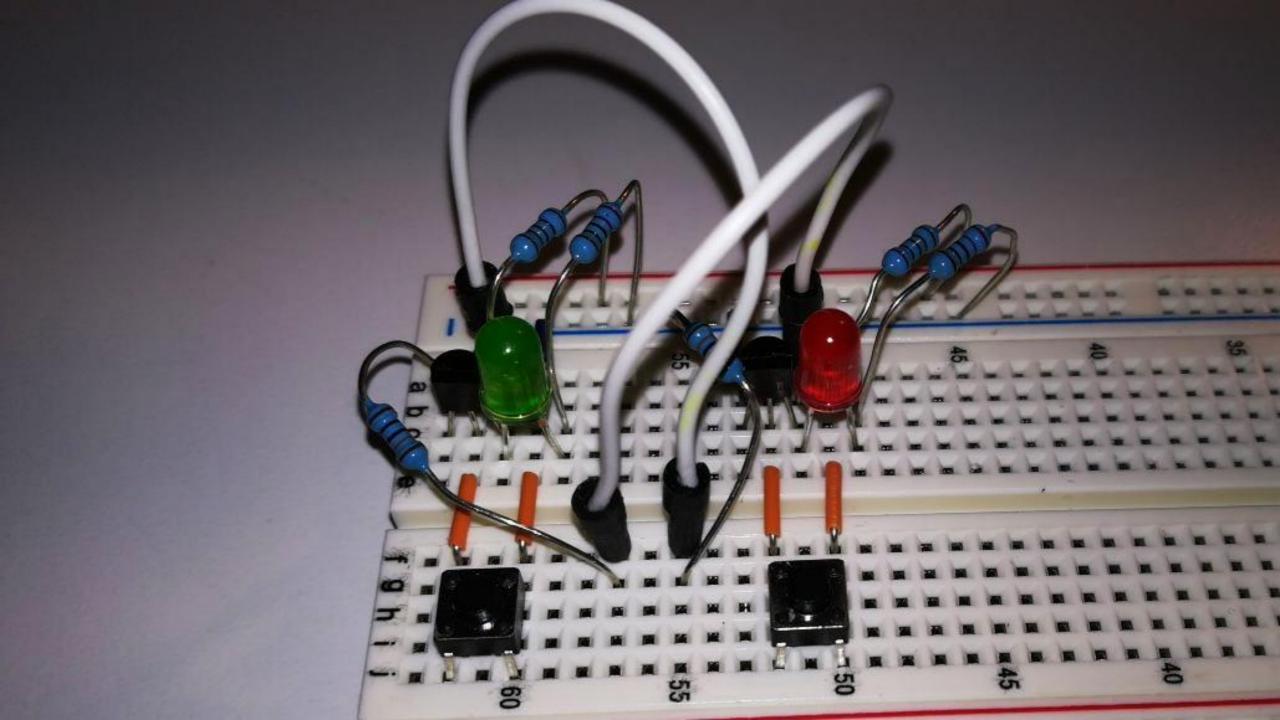

Schaltplan

Schaltplan

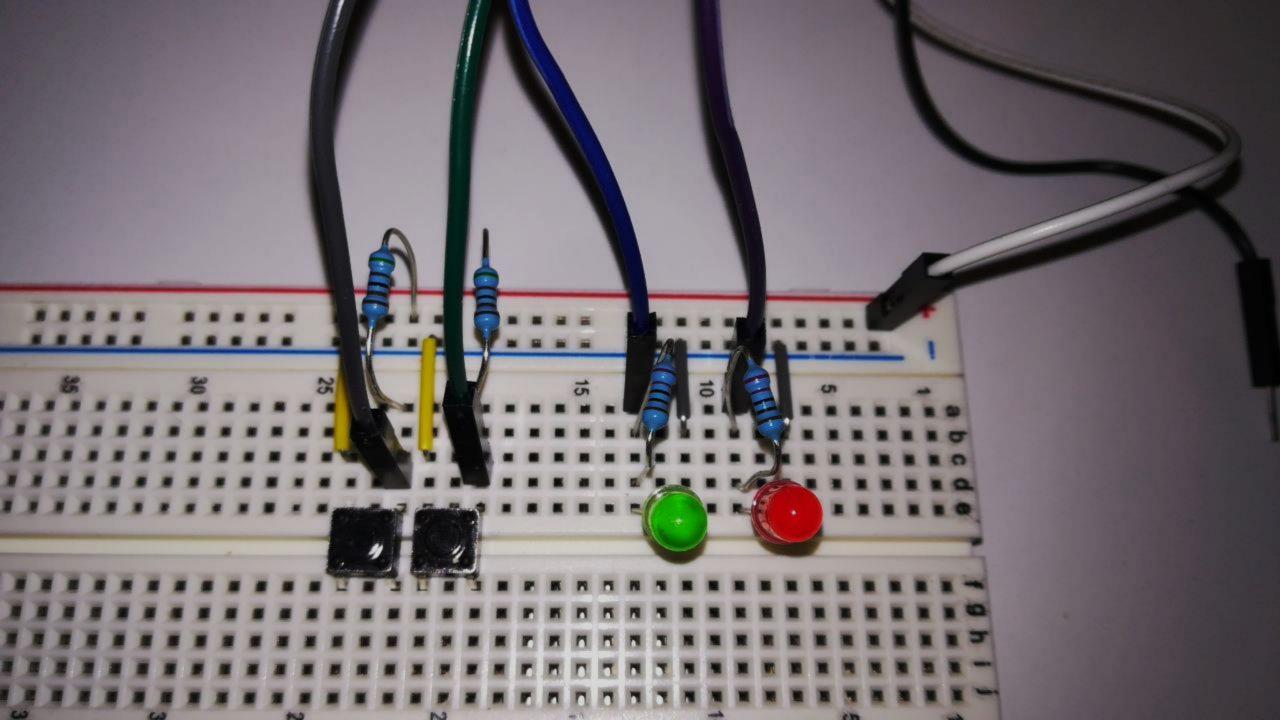

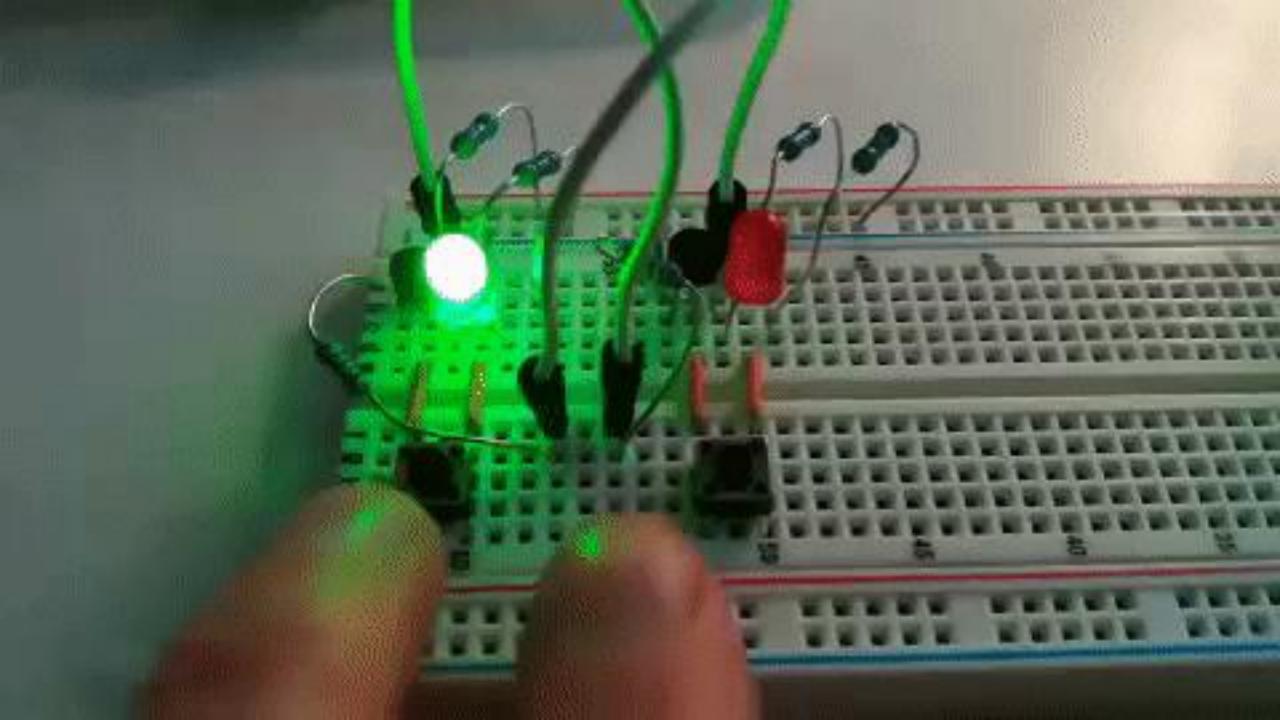

```
#include <Arduino.h>

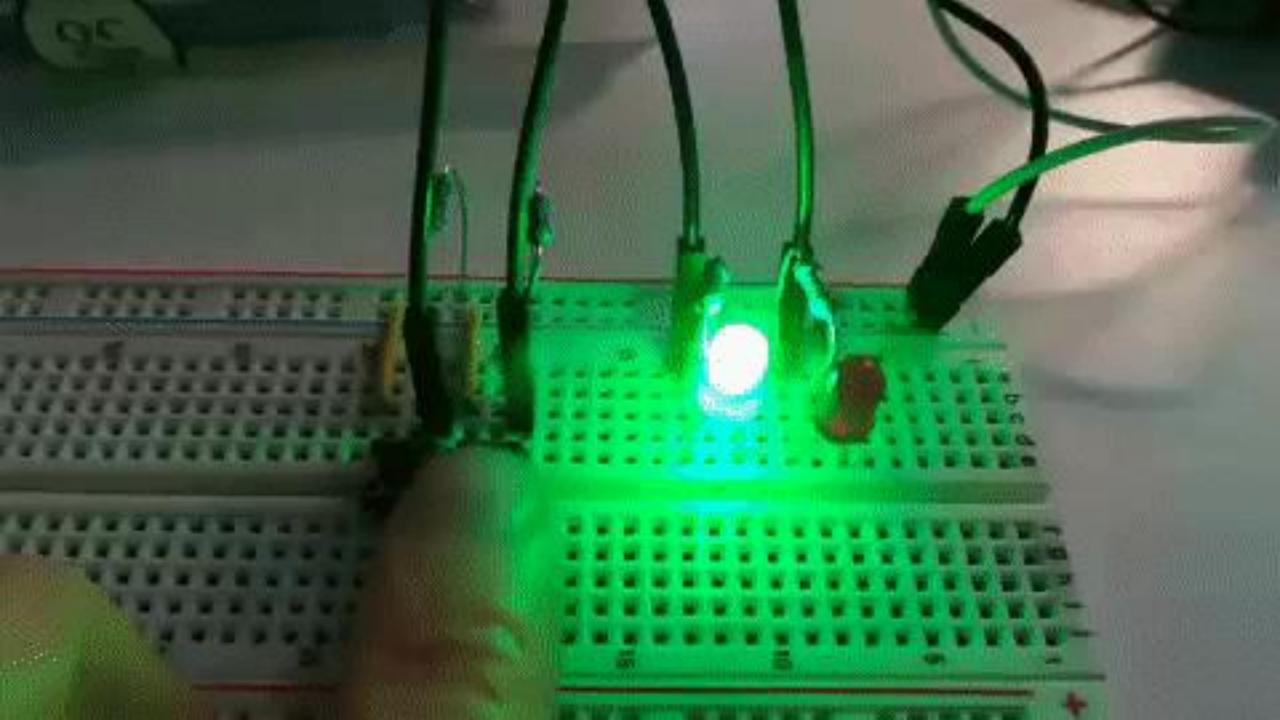

#define SET 5
#define RESET 18
#define Q 16
#define Q_INV 17

void write(bool q)
{
    digitalWrite(Q, q);
    digitalWrite(Q_INV, !q);
}
```

```
void setup()
 pinMode(SET, INPUT);
  pinMode(RESET, INPUT);
 pinMode(Q, OUTPUT);
 pinMode(Q_INV, OUTPUT);
 write(false);
void loop()
 if (digitalRead(SET) == 0)
   write(true);
  else if (digitalRead(RESET) == 0)
   write(false);
```

Vielen Dank!

Ich hoffe ihr konntet etwas mitnehmen.
